Fullstack Software Engineer

About us

Ditto helps teams manage their copy from design to production with a single source of truth. Over 3600 teams (from Fortune 500 companies to startups!) currently use Ditto.

We believe the words we use in our products are the most powerful tool we have to deliver experiences that convert, educate, and personalize. We're building Ditto to help turn words into your product's greatest advantage with a platform that works end-to-end to draft, iterate, and sync product copy from design to development.

We're backed by incredible investors like Y Combinator, Greycroft, Soma Capital, and founders/top operators from Doordash, Kabam, IFTTT, and Pinterest. We're a fast-moving team, and this role is an opportunity to join an early-stage startup as one of the first team members and directly impact how teams build products.

Our values

- Win as a team.
- Earn simplicity.
- Seek to grow and learn.
- Make it happen.

- Ground your conviction.

Learn more about our values.

As an early member of our engineering team, you'll be responsible for:

- architect, build, and own new product features from start to finish
- work across our products (web-app, developer integrations (API/CLI, SDK), plugins)
- work directly with founders on roadmap and strategy
- shape direction through communicating with customers and gathering user feedback
- help us grow the team by interviewing and onboarding future engineers

What you bring:

- can communicate clearly and empathetically
- has 3+ years software engineering experience
- is willing to quickly learn new frameworks/technologies and execute independently
- is familiar with React, Node.js, Express.js, MongoDB
